

Satellite radio is the best car-related purchase I have ever made. Please do not restrict my access to programs on satellite radio. I live in central PA where radio reception is poor and the quality of the stations is even poorer. I drive to the major eastern US cities frequently for work. I have to plan my trip around traffic problems. I CANNOT even receive the local radio traffic until it is already too late! In addition, I have to wait 20-30 minutes for an inadequate report on the local radio while satellite gives me 24/7 information.

Satellite radio is the coming technology. Like they tried to stop TV, the lousy local radio stations are trying to stop the tide of progress. Don't let them win!
